ABOUT

AI Engineer and Data Engineer with experience building scalable ETL pipelines, agentic AI systems, and Retrieval-Augmented Generation (RAG) applications. Experienced in processing large-scale legal datasets, semantic search, and developing AI-powered backend solutions with FastAPI and Python.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, HTML, CSS

Cloud & DevOps: Docker

Mobile & Frontend: React, React Native

Backend & APIs: FastAPI, REST APIs, Node.js, Firebase, Supabase

Data Engineering & AI: ETL Pipelines, Web Scraping, RAG, Fine-Tuning, Hugging Face Transformers, Prompt Engineering

Libraries & Frameworks: TensorFlow, Pandas, NumPy, Scikit-learn, BeautifulSoup, Selenium, Playwright

Databases & Tools: MySQL, PostgreSQL, FAISS, GitHub

EXPERIENCE

React Native Developer Intern — National Information Technology Board

July 2025 – September 2025

- Built cross-platform mobile applications using React Native (Expo) with responsive UI components and Firebase Authentication.
- Integrated REST APIs and third-party services to build scalable and high-performance mobile applications.
- Collaborated with the development team to implement reusable UI components and improve application performance.

Data & AI Engineer — Stealth Legal Tech Startup

February 2026 – June 2026

- Engineered AI-powered legal research solutions using LLMs, RAG pipelines, and semantic search.
- Processed, cleaned, and structured 450,000+ court judgments and 40,000+ legal provisions for scalable AI-powered legal search systems.
- Built automated data cleaning, validation, and auditing pipelines for JSON and JSONL datasets.
- Built semantic search pipelines using LangChain, embedding models, BM25 retrieval, FAISS vector indexing, and cross-encoder reranking.

PROJECTS

Biometric-Based Payment System (YouPay) — Final Year Project [2026]

- Built a React Native (Expo) app enabling cardless fingerprint-based transactions with Firebase authentication.
- Implemented biometric verification, secure transaction flow, and wallet management features.
- Integrated Firebase Authentication and Firestore for secure user management and cloud data storage.
- Cleaned and structured transaction data to improve storage and retrieval efficiency.

Scalable Legal Data Engineering System [2026]

- Designed and implemented scalable web scraping, ETL, and RAG pipelines for legal document processing.
- Automated data cleaning, transformation, chunking, and vector indexing of large-scale legal datasets.
- Built hybrid semantic search pipelines using embedding models, BM25 retrieval, FAISS vector indexing, and cross-encoder reranking for accurate legal document retrieval.
- Structured legal data for downstream analytics, machine learning, and LLM-based applications.

AI Legal Research Assistant [2026]

- Built an agentic AI legal assistant using FastAPI, LangChain, and Google Gemini.
- Implemented LLM tool calling for autonomous legal search and grounded responses.
- Developed a FastAPI backend and web interface for interactive legal research.

Legal Judgment Processing Pipeline [2026]

- Built a Python/FastAPI pipeline to extract, clean, and structure Pakistani court judgments with legal metadata.
- Implemented semantic chunking and 3072D Gemini embeddings for searchable legal data.
- Integrated Supabase PostgreSQL + pgvector for structured storage and vector search.

WhatsApp Ordering ChatBot [2026]

- Built a restaurant ordering chatbot using FastAPI, Python & Supabase.
- Designed a state-machine architecture for menu navigation and order processing.
- Implemented cart, checkout, session & order management with PostgreSQL.

EDUCATION

Bachelor of Science in Computer Science [2022 – 2026]

HITEC University

Major: Data Science

CERTIFICATIONS

Code War Event Head — Managed logistics, team roles, and problem creation coordinated communication between participants and judges.

Workshop on Front-End Development — Completed a Front-End Development workshop covering modern web technologies
